ABDULMJEED ABDULAZIZ HOMIDAN

DATA ANALYST
Saudi Arabia | abdulmjeedhomidan@gmail.com | 0590148052

ABOUT ME

Data Science graduate with 7 months of practical experience in data analysis, data visualization, dashboard development, and technical operations. Supported a Ministry of Health project through data cleaning, analysis, reporting, and interactive dashboards, and built VitaVision, a web platform that classifies nutritional laboratory results using clinical reference ranges and machine learning. Currently working as an Automation Engineer. Skilled in Python, Pandas, SQL, Scikit-learn, and Plotly, with knowledge of classification, clustering, regression, and anomaly detection.

PROFESSIONAL EXPERIENCE

Automation Engineer - Alkan Construction & Communication Networks
Riyadh, Saudi Arabia | September 2026 – Present

- Support automation and technical operations within the company.
- Work with data and technical processes to improve operational efficiency.
- Analyze and organize technical data to support project activities and decision-making.

Data Analyst Intern - International Medical Health (IMH)
Riyadh, Saudi Arabia | March 2025 – August 2025

- Contributed to a Ministry of Health project installing and monitoring electronic sensors for oxygen tanks across hospitals.
- Cleaned, organized, and analyzed operational data using Python and Pandas.
- Developed interactive dashboards and reporting interfaces with Streamlit and Plotly to monitor installation progress and project performance.
- Prepared data summaries, reports, certificates, and project documentation to support project tracking and decision-making.
- Conducted field visits to healthcare facilities and clusters to collect, verify, and organize project data.
- Participated in meetings with Ministry of Health teams and supported coordination and follow-up for the Makkah and Taif clusters.

PROJECTS

VitaVision - Health Analyzer | Nutritional Biomarker Analysis Platform | www.vitavison.com

- Built a web platform that analyzes nutritional laboratory results and classifies each biomarker as Deficient, Normal, or Excessive.
- Designed the full pipeline from CSV upload to report: data cleaning (missing values, duplicates, data types, outliers), preprocessing, classification, and visualization.
- Applied a hybrid approach: clinical reference ranges determine the final status, with a Random Forest classifier as the machine-learning component (about 99.96% accuracy against the rule-based labels).
- Developed interactive dashboards showing nutrient status distribution, nutrient comparisons, and demographic patterns.
- Tools: Python, Pandas, NumPy, Scikit-learn, Plotly, Matplotlib, Streamlit, Joblib.

EDUCATION

Bachelor of Science in Data Science | Aug 2022 – Aug 2026
Umm Al-Qura University - College of Computing
Relevant Coursework: Data Analysis, Machine Learning, Statistics, Database Systems, Data Visualization, Artificial Intelligence.

SKILLS

- **Programming & Data:** Python, SQL, R, Pandas, NumPy
- **Data Analytics:** Data Cleaning, Exploratory Data Analysis (EDA), Statistical Analysis, Data Visualization, Dashboard Development
- **Machine Learning:** Scikit-learn, Classification (Random Forest), Joblib
- **Tools & Technologies:** Streamlit, Plotly, Matplotlib, Tableau, Jupyter Notebook, Git/GitHub, Microsoft Excel
- **Soft Skills:** Analytical Thinking, Problem-Solving, Teamwork & Collaboration, Communication, Time Management, Project Coordination, Quick Learning & Adaptability, Attention to Detail
